

THE RENTAL ONE.

- ✓ V-Type Alternator
- ✓ GC400M Controller
- ✓ Battery Charger

All the kit you need.
All in one place. All in one box.

In harsh and challenging environments, such as construction sites, the last thing you need is an alternator that's not up to the challenge. Engineered for reliability, Mecc Alte's Rental ONE component kit, is built to last whether it's facing dust, continuous vibration or constant relocation.

The Rental ONE's V-Type alternator is a result of Mecc Alte's collaboration with Hire companies. It's built for endurance and reliability, with an advanced insulation system and Mecc Alte's exclusive VT+ winding treatment.

This is Mecc Alte's most resilient alternator, ever.

Backed-up with a 5 year warranty, we're confident its durability-conscious design translates into long, trouble-free periods of uptime – even in tough conditions. Saving you not only time on regular servicing, but money too.

The Rental ONE component kit integrates the V-Type alternator with a GC400M controller, ideally suited for managing different types of parallel applications.

GC400 Mains version is the perfect controller for those applications where the reverse synchronization is required to avoid any interruption to the supply to the load. As well as providing local or remote control, this version with built-in GPRS/GPS tracking is suited for rental applications, where asset tracking and monitoring is required. The kit also include a battery charger, and governor to create a comprehensive power generation package for the most demanding applications.

Our alternators and controllers are also Mecc Alte Smartech enabled. With the ability to communicate directly through CANbus or remotely through WiFi connection, you can monitor and troubleshoot power situations even when you are away from site.
